

LIFT 'N' SHIFT MIGRATION FRAMEWORKS FOR NETEZZA®

OVERVIEW

Migrating your existing Data Warehouse to an IBM® Pure Data™ for Analytics Netezza system just got a little bit easier (not to mention faster, cheaper, and less risky).

As one of the world's leading Netezza specialists, our Associates have an enviable track record of reducing the time to value for our customers when migrating to Netezza.

That's because rather than redoing everything from scratch, each time, for every customer - and charging for every hour spent doing so - instead we focus on encapsulating everything we've learnt along the way into a library of reusable methodologies, tools, and techniques to automate as much of the process as possible in a repeatable way.

This mature capability along with the breadth and depth of our Netezza experience is what differentiates us from the competition, and what enabled us recently to migrate half a dozen 20TB Oracle® databases to Netezza in a matter of weeks; or run existing Teradata® SQL

scripts containing non-standard functions on Netezza without having to rewrite them first.

We even have solutions for customers wanting to migrate from older generations of Netezza system (like Mustang) to more recent Twin Fin or Striper hardware, without leaving behind any of their users, permissions, custom Stored Procedures or User Defined Functions.

Whatever the technology, our goal is always the same: to help make our customers successful as quickly as possible.

And we'd like to do the same for you.

SUPPORTED PLATFORMS

Reusable migration optimisations exist for the following specific source platforms:

- Microsoft® SQL Server®
- Oracle
- DB2™
- Netezza

PRICING

Price will vary according to scope, volume of data, and the technologies involved. Please contact us to discuss your precise requirements, and to receive a personal quotation.
