

## The Yellowbrick Data Warehouse

Make your business better, stronger, faster...than it was with Netezza

Yellowbrick has created the Ultimate Data Warehouse. It was built to be the industry's premier analytics engine to help business get the most value out of their data. Yellowbrick Data has created a product that will go far beyond the capabilities of your Netezza system to be faster, easier to manage, and instantly scalable. Deploying Yellowbrick to upgrade from Netezza is fast and painless. Within minutes, you can be up and running more efficiently than ever before.

The Yellowbrick Data Warehouse:

- Installs easily as an integrated software and hardware rack-mount appliance
- Suits your capacity needs from 32TB up to 1PB of raw storage and over 500 CPU cores
- Provides enterprise integrations like Netezza for LDAP, SNMP, syslog, and a security model

Yellowbrick delivers familiar database software:

- Same PostgreSQL dialect
- Supports PL/pgSQL stored procedures
- Library of functions added for Netezza compatibility
- Intuitive syntax like Netezza (e.g., nzload is ybload)
- Similar ecosystem integrations through standard ODBC, JDBC, and ADO drivers
- Supported by common enterprise tools like Tableau, Microstrategy, and Informatica

## Migrate your data in minutes

Get expert assistance from a Yellowbrick Solutions Architect to:

- Scope and plan your migration, as part of a Proof of Concept
- Migrate your schema, data, application logic, ecosystem tools, and users

Jump in and start using Yellowbrick on day one:

- Requires very little tuning and configuration
- No need for training and certification

## Improvements beyond Netezza make your day-to-day life easier

- Applications and databases run at top speed with superior concurrent and mixed workload support
- DBAs no longer need to groom or vacuum tables
- Statistics are automatically gathered and kept up-to-date

**GIVE YOUR COMPANY AN ANALYTICS PLATFORM FOR THE FUTURE**

- Scale compute and storage capacity incrementally simply by adding more blades
- Size your environment based on your initial storage needs instead of estimating what you need five years from now
